Appendix A - where is MS? Shouldn't user know where it is if it
has been referenced (page 27 - prism numbers)?

Should users know where to go to ask about a system security
problems? (I suppose CSS and point them in the right direction.)

And speaking of PRISM numbers a clinical description of the
physical components of a prism number seems to me to be of little
value. Why not a couple of words on why PRISM numbers exist and
are used for.   STATINTL
